

MISSION

is to make businesses more **efficient** by using the best technology available to them and **save them money.**

Taking your business to new heights with Cloud Computing.

OUR SERVICES : CLOUD COMPUTING

Cloud Computing is...
a space stored on the Internet that
can be securely accessed by you
for your business data, files,
email and photos.

Consulting, deploying and implementing technologies that are efficient and affective are what we are known for. Cloud computing brings a new level of efficiency and economy to delivering IT resources on demand – and in the process it opens up new business models and market opportunities.

The Cloud Computing service we deliver takes away the need to spend on bulky hardware, virtualising it and centralising it all in the Cloud. Our service make it possible for companies to convert their IT costs from capital to operating expenses. **Its IT efficiency on a whole new scale.**

KEY BENEFITS

Compared to traditional IT the Cloud can offer so much more!

Efficient

- Multiple departments/branch servers are consolidated
- All staff can access same server
- Easy file sharing amongst staff and across branches
- Widely considered 'Green' due to efficient use of power
- Our data centre uses re-newable energy
- Faster bandwidth on a fibre network
- Fast deployment
- Data is secure
- Data is backed-up
- 99.9% Uptime
- Easy to manage

Cost-Saving

- Saves money on server hardware
- Saves money on software upgrades
- Reduced energy bills
- Only pay for what you use
- Less in-house IT costs
- Low monthly payments
- No upfront costs needed
- SPLA Licensing
- Frees up space from bulky hardware

Flexible

- Scalable
- Add soft/hardware in an instant
- Easy upgrades on new software
- SPLA Licensing
- Ability to work from home, abroad, at different branches - still logging in to your own desktop.
- Freedom to explore business agility.
- Unlimited 100MB bandwidth

Microsoft Licenses

Centralising company data via the Cloud means only needing to **purchase Microsoft licensing once** rather than for each server. This consolidation makes things **easier to manage** and very **cost effective**.

For the individual user, we provide **SPLA Licensing** (Service Provider License Agreement), you **pay per month** for what is needed instead of a yearly upfront cost. Its **flexible** around the business too. Hiring more people? They can simply be added each month as and when.

"We are already seeing amazing benefits, massively increased speed of response from our computers and complete peace of mind that our data is completely secure. My working life has just become a whole lot easier to manage. I can log on to my computer and work as normal whether I'm in the office, at home or half way up a mountain!"

Gina Simpson – Aegis Law Ltd

Fibreoptic Speeds

Nuage Technology doesn't charge for bandwidth, you can use as much as you want! For connectivity you link to 100MB Fibre Connection (10MBs/sec download)

Your company's internet only needs a 2MB connection to gain access to this!

Secure Storage & Back Up

Data is **stored securely** at our Manchester Datacentre under a **256bit encryption VPN tunnel**, with **100% power uptime**. We use **multiple hard drives** to store the data protecting from any failures and reducing the possibility of losing data to nil. This incredibly secure network can allow staff to work from home or different locations if desired. Folders and files can be set to various management levels, giving access only to people who need it. As well as restricting internet use if required.

Our 3 point back-up system also includes the use of an additional datacentre in North Wales.

The data centre itself boasts 24/7 on site security staff CCTV cameras (both internal and external), motion detection and a key fob access system.

Secure off site back-up is a standard level requirement for a **Lexcel Accreditation**

For those in the legal sector

'I believe Cloud Computing will profoundly change the way organisations do their computing. Proof is in the fact that major vendors like IBM, Google and Microsoft are investing tens of billions of dollars in building their cloud infrastructures.'
Bernard Golden (CEO Hyperstratus)

Upgrading the Hardware / Software

If more hard drive space or memory is required - we can add this instantly, rather than physically needing to buy a part and come out to install, creating unwanted and unnecessary downtime.

Cloud computing accommodates change like no other model.

SO WHAT DOES THIS REALLY MEAN?

What does it look like?

The user experience in a visual sense is unchanged. You connect to the cloud via your existing **computer, laptop, smartphone or iPad** - but be ready for a quicker experience, that's smarter, flexible and stress-free!

WHAT TO DO NEXT?

Contact us about our Monthly Cloud Packages.
